

2/11

- FLTP

- Multicast

- PIM

- 11:20 - 11:50 Exam 1

# BGP

— routes are to

IP prefixes

128.125/16 — AS path

# HLP

— routes are to ASs

AS125 — FPV

— /

AS, prefix

mapping

multiple

IP prefixes

## Key ideas + ILLP

- Fragmented path  
vector
- AS routers

- Cost Hiding — Isolation
- Optimizes for common case  
— exceptions

BGP  $\longleftrightarrow$  HLP

Common - Case  
but  
allows  
exceptions

General  
Policies

BGP

HLP

$n \xrightarrow{k(D)}$

$1 \dots 4$

$n \sim n^4$

BGP

$O((n-1)!)$

AS AS

# Multicast

## IP Multicast

- Routing
- Reliable Transport

## End System Multicast

Delivery

Unicast

Broadcast

↓  
Multicast

# IP Multicast

- Lectures, Video casts → CDNs
- Collaboration → Servers

# Service Model

Unicast

API network

$\text{send}(d, \text{pkt})$

$(\text{pkt}, s) = \text{rcv}()$

IP address of host/routers

# IP Multicast

← class D address

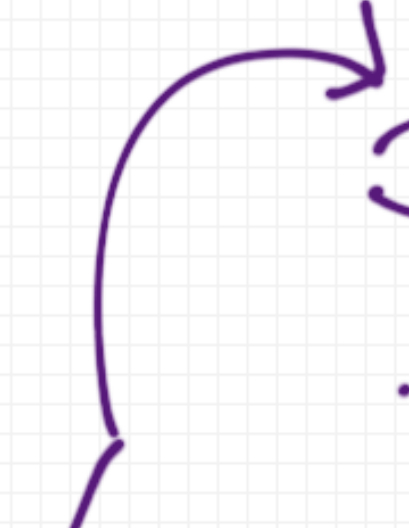

224.0.0.0 -

↑ identifier for members  
of a multicast group

— has no information  
abt group members

- Anyone can be a member of a group
- group members join/leave dynamically
- any one can send to a group  
↑ non-members
- Senders don't know who receivers are

# Service model

- $\text{Send}(g, \text{pkt})$
  - $\text{Join}(g)$
  - $\text{leave}(g)$
  - $(\text{pkt}, g) = \text{receive}()$
- 

join(g)

← end hosts

join(g)

leave(g)

}

} Routing
